

Follow these instructions to allow a system extension and a Cloudflare certificate on your device.

System extension

1. On the Mac device, click on the **Apple icon > System Preferences**.
2. Navigate to **Privacy & Security**.
3. Under Security, click **Allow** to allow the DNSProxy system extension.
4. Enter the user's Mac password.
5. Click **Allow**.

Cloudflare certificate

1. On the Mac device, use Finder to search for and open Keychain Access.
2. Go to **System > Certificates**.
3. Double-click your certificate. The default Cloudflare certificate is named Cloudflare for Teams ECC Authority.
4. Select **Trust**.
5. Change when using this certificate to **Always Trust**.
